

Remember nature access guide part 1

Larger wheelchairs or mobility scooters may struggle with some of the narrow paths and gates

My standard sized power wheelchair could access all the narrow paths and gates ok

There are some long or steep ramps which may be a challenge for some wheelchair users to get up independently

My power wheelchair could get up the ramp fine

You may need to go on different terrains including grass, uneven paving and cobbles

Remember nature access guide part 2

My wheelchair managed fine on most of the terrain but I got a bit stuck on a bumpy surface on canal

There are some parts of the route without many dropped curbs

My power wheelchair struggled with this as I have no curb climber and cannot do wheelies

There was some pavement parking and cars blocking dropped curbs

Overall this walk was mostly accessible for me, but may not be for you.
